

## **Jessica Brown - Affordances in handheld devices updated**

### **What is it made of?**

Though my model is made of paper, it is intended to be made of metal.

### **What does the material allow us to do with it?**

The metal allows the user to be more forceful with the object, knowing that it won't bend under pressure.

### **Does the shape suggest possible uses?**

It could be used as a bottle opener, as a knife, as a can opener, as a book mark, as a lever, as a box cutter, as a ruler, as a writing/carving utensil, as a hole punch, as a thumb tac, as a pencil sharpener, as a drawer stop, as a nail cleaner, as a skipping stone, as a back scratcher, as a mini grappling hook, as a paper weight, as a small door stop, as an eating utensil, and as a wall hook.
